**Genesis**-Jan Sapp 2003 What is evolution? What is a gene? How did these concepts originate and how did they develop? This book is a short history ranging from Lamarck and Darwin to DNA and the Human Genome Project, exploring the conceptual oppositions, techniques, institutional conditions and controversies that have shaped the development of biology.

**Vasiliy Grossman**-Frank Ellis 1994-06-14 Vasiliy Grossman (1905-1964) is now regarded as one of the major Russian prose writers of this century whose works have been unjustly neglected. An
eminent Soviet scholar said, "Solzhenitsyn writes for the hour, Grossman writes for the age" -- a view widely endorsed by other important critics and writers. His two major works, Everything Flows and Life and Fate were only recently published in the former Soviet Union -- a confirmation for many that glasnost was genuine. This is the first major study of Grossman in English. It will be of interest not only to students of Russian literature and politics but also to those who seek a better understanding of the struggle for intellectual and moral autonomy in the totalitarian state.

Individual Development and Evolution-Gilbert Gottlieb 2001-09-01 This work is intended to portray the interrelationship of heredity, individual development, and the evolution of species in a way that can be understood by nonspecialists. In striving to offer a straightforward historical exposition of the complex topic of nature and nurture, the author tells the story through a central cast of characters beginning with Lamarck in 1809 and ending with a synthesis of his own that depicts how extragenetic behavioral changes in individual development could be the first stages in the pathway leading to evolutionary change. On the way to that goal, he describes relevant conceptual aspects of genetics, embryological development, and evolutionary biology in a nontechnical and accurate way for students and colleagues in the behavioral and social sciences. The book presents a highly selected review as a prelude to the description of a developmental theory of the phenotype in which behavioral change leads eventually to evolutionary change. This book grew out of an invited interdisciplinary course of lectures for advanced undergraduate and graduate students at the University of Colorado, Boulder. Presenting the various ways about thinking about heredity, individual
development, and evolution, the author had three goals in mind: *to establish the relevance of individual development to the evolution of species; *to describe the most appropriate way to think about or conceptualize heredity in relation to individual development; *to show that this somewhat unorthodox manner of conceptualizing heredity and individual development gives rise to a new way to think about the behavioral pathway leading to evolution. In conclusion, the present work will provide a contribution toward the possible dissolution of the nature-nurture dichotomy, as well as a contribution to evolutionary theory.

The present state of thought on the origin and development of life. The book contains six chapters and begins with a brief history of attempts to solve the problem of the origin of life. This is followed by separate chapters the discuss the following events: the initial stages in the evolution of carbon compounds; formation of the "primitive soup"; origin of prebiological systems; evolution of "protobionts" and the origin of the first organisms; and the further evolution of the first organisms.

The Genesis Chronicles - Glen McBride 2001-05-01

The fifteen stages from Ramepithecus to Homo sapiens sapiens-the story of human evolution. ‘Sensing rather than seeing the attack, Yellowtip swung to face Beta, still grasping the branch. At full pelt Beta fell directly onto the straight point of the stick. With little more than a grunt, he wrenched himself back, then fell on the ground twitching and was still... Yellowtip drew himself erect, stick in hand. He had not
deliberately challenged Beta but, by destroying him, he should replace him in the hierarchy, though young and inexperienced. Tensely, he stared down at each male in turn, inviting challenge. One by one, they struggled to return his gaze, then dropped their eyes and turned aside. This was triumph—it felt glorious. Yellowtip's accidental discovery of weaponry provides the basis for the first chronicle in Glenorchy McBride's personal take on the history of evolution. Like many great discoveries over the history of time, some of the fifteen steps on the long road from Ramepithecus to Homo sapiens sapiens were serendipitous and some the result of trial and error, but all are described with wit and compassion in this entertaining and thought-provoking book. We squat with Fireboy as he anxiously nurtures the first flickering embers and run with Ton and his beloved wolf-cub. We sit at Roo's feet as she shares her dreams of the first totem spirit; we meet the first artists, the first traders, the first herders and, finally, the Sower of seeds, the visionary who led her people towards our own modern agriculture. Drawing on his long and distinguished career as an internationally recognised ethologist, Glenorchy McBride illustrates each of his chronicles with detailed scientific background material. The Genesis Chronicles present a picture of the history of evolution, a picture which prompts McBride to ask whether our evolution has fitted us for the world we have created or whether we are irredeemably flawed by our ancestral experiences.

Trials of Irish History-Evi Gkotzaridis 2006 Bringing her original insights into theory and philosophy to bear upon the controversial question of revision in Irish history, Evi Gkotzaridis presents the first historical and theoretical examination of the trailblazer historians who, from 1938, spearheaded an unpolticitized Irish history. Drawing on hitherto unused archives, Trials of Irish History shows how the venture to disenthrall Irish and European history from official propagandas proved stimulating and challenging, but perilous. Providing a new and stimulating conceptual framework for the study of Irish historiography, the book combines a theoretical approach with close analysis of important case studies and includes: * an incisive restaging of the passionate joust that took place between revisionists and traditionalists in the shadow of the Troubles * examination of the cultural contradiction of the first decades of independence, the estrangement of two regimes and the devastation of the Second World War * comparison of the Irish Kulturkampf to similar discussions in German and France in order to identify and examine the arguments propounded on each side. Prising open conflicting intellectual notions about the
function of history in a divided society, this will be an informative and stimulating addition to the study of Irish history.
