Cognitive Sophistication and the Development of Judgment and Decision-Making

Maggie E. Toplak 2021-11-15 Cognitive Sophistication and the Development of Judgment and Decision-Making reviews the existing literature on the development of reasoning, judgment, and decision-making, with a primary focus on measures from the heuristics and biases tradition. The book presents a model based on cognitive sophistication to examine the development of judgment and decision-making, including age-related differences in developmental samples, associations between intellectual abilities and executive functions, and associations with dispositional tendencies that support judgment and decision-making. Additional sections cover the empirical findings of a longitudinal study conducted over seven years that tie together the discussed aspects related to cognitive sophistication. This book will provide a much-needed description of the theoretical and conceptual issues, a review of empirical findings, and an integrative summary of the implications for developmental models of reasoning, judgment and decision-making. The Development of Judgment and Decision-Making in Children and Adolescents is divided into three parts. Part I presents three developmental models that differ in the importance of different cognitive components and their order of development. Part II examines the emotional, social, and physical aspects of decision-making. Part III focuses on how individuals make decisions based on empirical evidence found in the longitudinal study.

Judgment and Decision Making

Bence Fichter 2013-07-16 Behavioral decision research offers a distinctive perspective on understanding individual differences in decision making. It combines theory and method from multiple disciplines (psychology, economics, statistics, decision theory, management science). It employs both empirical methods, to study how decisions are actually made, and analytical ones, to study how decisions should be made and what inaccurate imperfections are. This book brings together key publications, selected to represent the major theories and approaches used in the field. Put in one place, with integrating commentary, it shows the connections between a research topic at a specific point in time, and the steps up till date, in which both theory and method are developed.

Judgment, Decision-Making, and Embodied Choices

Markus Raath 2020-10-27 Judgment, Decision-Making, and Embodied Choices explores the ways in which guilt functions within individual lives and intimate relationships, looking at behaviors that typically induce guilt in both historical and modern contexts. He examines the role of guilt in decision-making and decision processes. He then turns to the socio-cultural aspects of guilt and addresses society's attempts to come to terms with guilt by cultivating it. The book offers an original work of interdisciplinarity, material from the primary and secondary literatures. Through the extensive use of literature and personal accounts, it provides a unique perspective that is meaningful for understanding human functioning in everyday scenarios. This is the first book focusing on the role of guilt as a second brain, introducing a fresh perspective on the psychological, cognitive, and social implications of guilt. The book offers an integrative method that represents the overall study of guilt.

The Gabčíkovo-Nagymaros Judgment and Its Contribution to the Development of International Law

Serena Forlati 2020-05-18 The Gabčíkovo-Nagymaros Judgment and Its Contribution to the Development of International Law provides an introduction to important legal developments in the context of the Gabčíkovo-Nagymaros Dam case. The Gabčíkovo-Nagymaros Dam is a hydroelectric dam on the Danube river located in Hungary and Slovakia. The case was decided by the International Court of Justice (ICJ) in 1991, which made important contributions to the development of international law. The Gabčíkovo-Nagymaros Judgment and Its Contribution to the Development of International Law provides a comprehensive analysis of the Gabčíkovo-Nagymaros Dam case and its implications for international law. The book is divided into three major sections: (1) Attribution and Social Judgment, (2) Moral Development and a Sense of Self, and (3) Social Identities on Cognitive Development. Neuroeconomics, Judgment, and Decision-Making

Susan A. Wilson 2014-07-11 This volume explores the complex role that economics and finance play in our daily lives, with a particular emphasis on how economic theories are used to understand human behavior and the decision-making processes that drive our choices. It provides a comprehensive overview of the latest research in neuroeconomics, including descriptions of the brain mechanisms that underlie economic decision-making, as well as the implications of these findings for practical applications in fields such as finance, business, and psychology. The book is divided into four major sections, each devoted to a specific area: (1) The Neural Basis of Economic Decision-Making, (2) The Neural Basis of Economic Preferences and Values, (3) The Neural Basis of Economic Emotions and Motivations, and (4) The Neural Basis of Economic Social Judgments. Each section is further divided into subtopics, providing a detailed examination of the latest research in this exciting and rapidly evolving field.

Individual Differences in Judgment and Decision-Making

Maggie E. Toplak 2016-11-25 Children face an overwhelming amount of information and a range of different choices every day, and so there has never been a more important time to understand how children learn to make judgments and decisions in our modern world. Individual Differences in Judgment and Decision-Making presents cutting-edge developmental research to fill this gap in our understanding of the role that differences in individual characteristics play in children's judgments and decisions. The book takes a broad perspective and is written in an accessible way so as to reach a wide audience of advanced students and researchers interested in behavioral economics and related areas. This includes neuroscientists, neuroscientists, clinicians, psychologists, theoretical, social and cultural psychologists, and other social scientists; legal scholars and criminologists; professionals in public health and medicine; educators; evidence-based practitioners; and policy-makers.
